

ClustrixDB 9.2

New Features

ClustrixDB 9.2 is a major release that includes:

- Enhancements to the usability and configurability of Partitioned Tables including support for [REORGANIZE](#) and [EXCHANGE PARTITION](#)
- The ability to set the [slice split threshold at the table level](#)
- More efficient processing for queries that use anti-semijoin
- Support for replication from MariaDB 10.2+ to ClustrixDB using "old-style" replication. GTID features not supported.
- Full support for `autocommit = off`
- The `sql_mode` for [STRICT_TRANS_TABLES](#) is now supported and default.

as well as numerous improvements to performance and stability. See [the full release notes](#).

Clustrix 9.2 also includes beta support for [Parallel Replication](#).
